

KANDINSKY Mobile: Visualization of Social Comments on Mobile Devices

Student: Clarence Castillo

Supervisor: Assoc Prof Sourav Saha Bhowmick

PRIMARY OBJECTIVES

Social media conversations provide a rich source of public opinions. However, there are limited tools available to facilitate its analysis. Moreover, growing popularity of mobile devices makes it necessary to develop such a tool for mobile phone users.

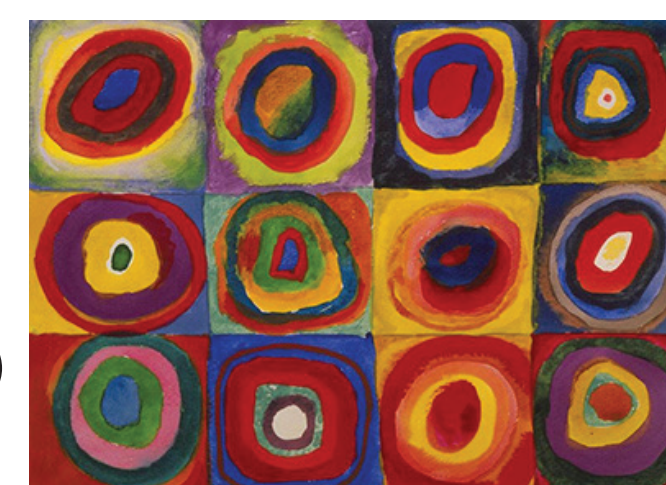

KANDINSKY Mobile is a mobile-based end-to-end visualization application, for supporting user analysis of voluminous and complicated social conversations.

INSPIRATION

KANDINSKY Mobile's design takes inspiration from renowned paintings of painter and art-theorist **Wassily Kandinsky** (1866 – 1944).

The design departs from traditional hierarchical list of comments into a novel visualization of circles and concentric circles varying in color and radius to represent comments in a social media discussion thread.

Squares with
Concentric
Circles (1913)

Several
Circles
(1926)
