# Remote Slide Presenter & Control Using Android Device
Enabling remote control functionalities with Bluetooth

Student: Darien Sim Wen Kai   **Supervisor:** Mr Tan Kheng Leong

Product Features:

Remote Keyboard and Mouse

Perform mouse actions through touch gestures and send keystrokes to the desktop computer.

Desktop Control

Volume control and power options (shut down, sign out, sleep and restart) are available.

PowerPoint Presenter

Control a running PowerPoint presentation with the PowerPoint presenter.

Screen Capture + Drawing with Markers

Illustrate on the desktop computer screen with markers.

Project Objectives:

This project aims to provide users with an alternative to a desktop computer's peripheral devices through an Android application. This provides users with great convenience and flexibility, especially in instances where peripheral devices such as keyboards and presenters are faulty or unavailable. A desktop application was also developed to maintain a Bluetooth connection with the Android device for the transmission of data and instructions.
