# Automated Assessment Platform
Easy to use platform for administering online assessments

Student: Soh Yan Quan, Kenneth   Supervisor: Dr Loke Yuan Ren

Project Objectives:

This project aims to create an in-house automated assessment platform that is both fast and intuitive to use while providing the features necessary to deliver an optimal assessment taking experience to both students taking assessments on the platform as well as instructors creating the assessments. On top of that, the platform will also scale accordingly to the current user load to ensure smooth and speedy delivery of assessments regardless of the number of users currently using the platform. Finally, the platform is fully self-contained to ensure greater control of the platform's user data.

Quiz Assessment Interface

Features

Code Assessment Delivery
Short Answer Question Delivery
Assessment Reports
OTP Locked Assessments
Time-limited Assessments
Practice Assessments
