# Person-Centred Care for Dementia Patients

Student: Ho Jun Yi   Supervisor: Assoc Professor Chan Syin

Introduction

This project aims to develop an efficient and secure software system to assist caregivers in the care centre.

Technologies Used

The front-end mobile application was developed on Android Studio and Microsoft ASP.NET MVC5 for both the back-end mobile application and web application framework.
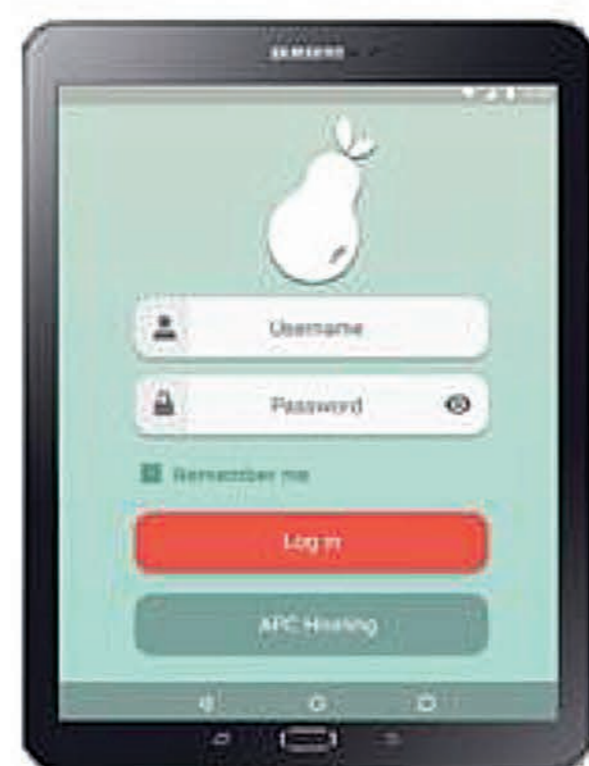

System Overview

The application aids the caregivers in taking care of the patients. It supports real-time updates and send notifications to reflect changes made.

Android Games
Android Tablet
Personal Computer
Server
Database
