Charissa HO Lixuan, Chemistry and Biological Chemistry

PROJECT SCIFUN

PROJECT BACKGROUND

Project SCIFUN, held on 10th December 2024 at Science Centre Singapore, brought 25 beneficiaries from Club Rainbow (Singapore) and their caregivers together for a fun science-filled day.

Supported by a group of 15 volunteers, the project featured an “amazing race”-style activity to spark their curiosity in exploring the sciences and create lasting memories with their families.

1

ACTIVITY BOOKLET DESIGN

Each participant received an activity booklet featuring 5 main exhibit-based and 4 filler activities. The exhibit-based activities were crafted around key installations at the Science Centre by the planning committee to enhance the learning experience.

2

PARTICIPANT GIFTS AND LANYARDS

Each participant received a gift package at the end of the event, which included 2 experiment kits, a kaleidoscope, and seasonal stickers in celebration of the upcoming holiday season. Lanyards were also designed and provided to participants and volunteers for easy identification around the Science Centre.

3

EVENT DAY

On the day of the excursion, participants and their caregivers were separated into groups of 10. Each volunteer was assigned to guide 2 participants through the planned activities and assist with navigating the Science Centre.
