

HW0128 Scientific Communication I

Study year : BS Year 2; BMS Year 2; BSPY Year 2; DSAI Year 1; MACS Year 1; MAEO Year 2;

SPMS Year 1; SSM Year 1

Academic units : 2 AUs

Co-requisite : HW0001 English Proficiency

Tutorial hours : 24 (weekly tutorials of 2 hours)

CONTENT

The aim of the course is to enhance the abilities of science students to recognise and employ the conventions used by scientists in their fields, in both academic and public settings. In this course, the emphasis is on micro skills in scientific communication such as searching academic databases, critically reading scientific texts, citing from sources, composing scientific arguments and making effective presentations to a non-specialist audience. As this is a foundation course, it will ensure that students are ready to engage with the more challenging skills of the second and more advanced scientific communication course that follows.

Please take note that this core course has been specially designed for NTU science students, taking into consideration their communication needs based on a university-wide survey. As such, it is excluded from course matching with other communication skills courses at overseas universities during exchange and summer studies.

LEARNING OUTCOMES

Upon successful completion of the course, students should be able to:

- 1. Evaluate scientific texts;
- 2. Cite texts appropriately;
- 3. Produce short academic texts relevant to the field of science; and
- 4. Make presentations on key scientific topics.

COURSE SCHEDULE

Week	Tutorial topics	Reading/Activities
1	No tutorial	-
2	Writing for a specialist/non-specialist audience	Unit 1
		 Recognise major differences in expectations between specialist and non-specialist audiences;
		Recognise key differences in language when writing for specialist and non-specialist audiences;
		Recognise important differences between speech and writing; and

HW0128

Scientific Communication I

Week	Tutorial topics	Reading/Activities 4. Identify and apply in your writing an appropriate academic style of communication.
3	Reading scientific texts critically	Unit 2
		1. Annotate a text effectively;
		 Apply appropriate strategies for identifying key ideas and arguments in a text;
		Evaluate and respond to key ideas and arguments in a text; and
		4. Examine the rhetorical context of a text.
4	Searching databases and writing from sources I	Unit 3
		1. Find and evaluate sources of information;
		2. Avoid plagiarism in your writing;
		3. Paraphrase, summarise and quote information appropriately in your academic texts;
		 Learn basic conventions of referencing in intext citations and end-of-text references; and
		5. Identify parts of an annotated bibliography.
5	Searching databases and writing from sources II	Unit 3
		1. Find and evaluate sources of information;
		2. Avoid plagiarism in your writing;
		3. Paraphrase, summarise and quote information appropriately in your academic texts;
		4. Learn basic conventions of referencing in intext citations and end-of-text references; and
		5. Identify parts of an annotated bibliography.
6	Peer review of Assignment 1 – Annotated	Unit 3
	bibliography	 Provide feedback to your peer on the content and organization of the assignment;
		Provide feedback to your peer on the grammar and mechanics of the assignment; and
		3. Provide overall comments on how your peer can improve the assignment.

HW0128

Scientific Communication I

To Composing scientific arguments Unit 4 1. Recognise the four key dimensions of effective scientific arguments, namely logos, ethos, pathos and kairos; 2. Empower yourself with the metalanguage used to identify parts of an argument; 3. Employ data or grounds and warrants effectively to support your claim and anticipate rebuttals; and 4. Identify some common logical fallacies. 8. Writing and revising a review paper Unit 5 1. Synthesise and evaluate the issues surrounding a given topic; and 2. Write a review paper based on journal article leading to the completion of Assignment 2. 9. Peer review of Assignment 2 – Review Paper Unit 5 1. Learn how to peer-review your classmates' review papers by applying a set of evaluation criteria; and 2. Revise your review paper based on the peer review. 10. Defining and explaining scientific concepts – Written Communication Unit 6 Unit 6 1. Write clear definitions and explanations of
scientific arguments, namely logos, ethos, pathos and kairos; 2. Empower yourself with the metalanguage used to identify parts of an argument; 3. Employ data or grounds and warrants effectively to support your claim and anticipate rebuttals; and 4. Identify some common logical fallacies. 8. Writing and revising a review paper Unit 5 1. Synthesise and evaluate the issues surrounding a given topic; and 2. Write a review paper based on journal articl leading to the completion of Assignment 2. 9. Peer review of Assignment 2 – Review Paper Unit 5 1. Learn how to peer-review your classmates' review papers by applying a set of evaluation criteria; and 2. Revise your review paper based on the peer review. 10. Defining and explaining scientific concepts – Written Communication Unit 6 Write clear definitions and explanations of
used to identify parts of an argument; 3. Employ data or grounds and warrants effectively to support your claim and anticipate rebuttals; and 4. Identify some common logical fallacies. 8 Writing and revising a review paper Unit 5 1. Synthesise and evaluate the issues surrounding a given topic; and 2. Write a review paper based on journal articl leading to the completion of Assignment 2. 9 Peer review of Assignment 2 – Review Paper Unit 5 1. Learn how to peer-review your classmates' review papers by applying a set of evaluation criteria; and 2. Revise your review paper based on the peer review. 10 Defining and explaining scientific concepts – Written Communication Unit 6 Written Communication Unit 6 Written Communication

HW0128

Scientific Communication I

STUDENT ASSESSMENT

Students will be assessed by 100% continuous assessment. The assignments are designed to focus on the course objectives and achieve the intended learning outcomes.

Assessment Weighting

Written assignments 60%

Students should demonstrate that they are able to write an annotated bibliography of an academic paper and a review paper on a scientific topic based on academic papers in their field of study.

Scientific presentations 25%

Students should demonstrate that they can deliver an informative presentation by defining and explaining scientific concepts in their field of study.

Class participation 15%

Students should demonstrate that they can contribute meaningfully to class discussions and complete the microsite activities.
